

BASWA mechanical fixing insert

2024 / 1

Product description and applications

The BASWA mechanical fixing insert works as an additional mechanical fastener used with BASWA acoustic Panels when they are installed over existing and old surfaces. They prevent the acoustic panels from dropping down if aging stucco begins to crumble and is released from the base, which could potentially cause injuries.

The sticks are mounted to the respective surface with a screw connection.

Product data

Material	Stainless steel (non-corrosive)
Item no.	a362
Dimensions	16 cm long, 3 mm thick
Required per m²	4 - 6 units (min. 2 for each panel)
Weight	10.5 grams per unit

Delivery

Shipping units	Cardboard boxes containing 100 each/1.10 kg/or as required
-----------------------	--

For more detailed delivery information, please contact BASWA acoustic AG, T +41 (0)41 914 02 22.

Instructions for Use

Installation (Example BASWA Phon)

1. Remove an area of the preliminary coating that matches the size of the mounting stick from the BASWA Phon Panel with the exception of the glass wool.
2. Firmly screw the fixation stick into the base mechanically using a suitable screw/dowel.
Important: Make sure that the screw is only tightened to the point where the acoustic panel is not concavely deformed!
3. Next, fill the area from which you have removed the preliminary coating around the screwed in fixation stick with BASWA Fill. Observe the drying time to allow the material to set. Once it has dried sufficiently, sand it to smooth it out and obtain an even surface.
4. For the next processing steps, please follow the respective valid BASWA Processing Guidelines.
